Port

Made from 100% Vinyl with a polyester backing in 22 colorways

Introducing Port

camira

www.camirafabrics.com

Port is a place of shelter, protection and sanctuary. It takes inspiration from well known Michigan harbors, which provide a safe anchorage for weary sailors and vessels from rough waters and natural disasters. Similarly, on upholstered furniture, Port protects and upholds in high traffic areas, providing maximum durability.

Port comes to life in an exciting modern palette consisting of 22 subtle neutrals and muted tones.

Performance

Port is an environmentally conscious phthalate free vinyl containing no fire retardants or biocides, making it the perfect textile to help create a positive impact on any interior space. With chemical exposure becoming an important factor and sustainability no longer an afterthought, Port is both Prop 65 and AB-2998 compliant, protecting human lives by not emitting or leaving any traces of harmful chemicals.

Leather like grain

Port incorporates visual and textural attributes that mimic leather. A urethane finish and a polyester backing makes this textile highly durable and pliable for a wide range use in interior applications. With a range that complements various textiles within the Camira portfolio, Port is the perfect addition, adding another vinyl option. Pairing nicely with existing vinyls such as Ebb and Flow but also adding visual textures with Oceanic

and Main Line Flax, Port brings more textile offerings that help Camira become your one stop shop for all your fabric needs.
